Salesforce

Introduction:

Are you new to Salesforce? Not sure exactly what it is, or how to use it? Don't know where you should start on your learning journey? If you've answered yes to any of these questions, then you're in the right place. This module is for you.

Welcome to Salesforce! Salesforce is game-changing technology, with a host of productivity-boosting features, that will help you sell smarter and faster. As you work toward your badge for this module, we'll take you through these features and answer the question, "What is Salesforce, anyway?".

What Is Salesforce?

Salesforce is your customer success platform, designed to help you sell, service, market, analyze, and connect with your customers.

Salesforce has everything you need to run your business from anywhere. Using standard products and features, you can manage relationships with prospects and customers, collaborate and engage with employees and partners, and store your data securely in the cloud.

So what does that really mean? Well, before Salesforce, your contacts, emails, follow-up tasks, and prospective deals might have been organized something like this:

Creating Developer Account:

Creating a developer org in salesforce.

Go to

On the sign up form, enter the following details :

First name & Last name

Email

Role : Developer

Company : College Name

Country : India

Postal Code : pin code

Username : should be a combination of your name and company

This need not be an actual email id, you can give anything in the format  
: username@organization.com

Click on sign me up after filling these.

Account Activation

Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

Click on Verify Account

Give a password and answer a security question and click on change password.

Then you will redirect to your salesforce setup page.

Object

What Is an Object?

Salesforce objects are database tables that permit you to store data that is specific to an organization. What are the types of Salesforce objects

Salesforce objects are of two types:

Standard Objects: Standard objects are the kind of objects that are provided by salesforce.com such as users, contracts, reports, dashboards, etc.

Custom Objects: Custom objects are those objects that are created by users. They supply information that is unique and essential to their organization. They are the heart of any application and provide a structure for sharing data.

To Navigate to Setup page:

Click on gear icon ? click setup.

To create an object:

From the setup page ? Click on Object Manager ? Click on Create ? Click on Custom Object.

On Custom object defining page:

Enter the label name, plural label name, click on Allow reports, Allow search.

Click on Save.

Create Customer DetailsObject

To create an object:

From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.

Enter the label name >> Customer Details

Plural label name >> Customer Details

Enter Record Name Label and Format

Record Name >> Customer Name

Data Type >> Text

Click on Allow reports and Track Field History,

Allow search >> Save.

Create Appointment Object

To create an object:

From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.

Enter the label name >> Appointment

Plural label name >> Appointments

Enter Record Name Label and Format

Record Name >> Appointment Name

Data Type >> Auto Number

Display Format >> app-{000}

Starting number >> 1

Click on Allow reports and Track Field History,

Allow search >> Save. Create

Service records Object

To create an object:

From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.

Enter the label name >> Service records

Plural label name >> Service records

Enter Record Name Label and Format

Record Name >> Service records Name

Data Type >> Auto Number

Display Format >> ser-{000}

Starting number >> 1

Click on Allow reports and Track Field History,

Allow search >> Save.

Create Billing details and feedback Object

To create an object:

From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.

Enter the label name >> Billing details and feedback

Plural label name >> Billing details and feedback

Enter Record Name Label and Format

Record Name >> Billing details and feedback Name

Data Type >> Auto Number

Display Format >> bill-{000}

Starting number >> 1

Click on Allow reports and Track Field History,

Allow search >> Save.

Tabs

What is Tab : A tab is like a user interface that is used to build records for objects and to view the records in the objects.

Types of Tabs:

Custom Tabs

Custom object tabs are the user interface for custom applications that you build in salesforce.com. They look and behave like standard salesforce.com tabs such as accounts, contacts, and opportunities.

Web Tabs

Web Tabs are custom tabs that display web content or applications embedded in the salesforce.com window. Web tabs make it easier for your users to quickly access content and applications they frequently use without leaving the salesforce.com application.

Visualforce Tabs

Visualforce Tabs are custom tabs that display a Visualforce page. Visualforce tabs look and behave like standard salesforce.com tabs such as accounts, contacts, and opportunities.

Lightning Component Tabs

Lightning Component tabs allow you to add Lightning components to the navigation menu in Lightning Experience and the mobile app.

### Lightning Page Tabs

Lightning Page Tabs let you add Lightning Pages to the mobile app navigation menu.

Lightning Page tabs don't work like other custom tabs. Once created, they don't show up on the All Tabs page when you click the Plus icon that appears to the right of your current tabs. Lightning Page tabs also don't show up in the Available Tabs list when you customise the tabs for your apps.

### Creating a Custom Tab

To create a Tab:(Customer Details)

Go to setup page >> type Tabs in Quick Find bar >> click on tabs >> New (under custom object tab)

Select Object(Customer Details) >> Select the tab style >> Next (Add to profiles page) keep it as default >> Next (Add to Custom App) uncheck the include tab .

Make sure that the Append tab to users' existing personal customizations is checked.

Click save.

### Create a Lightning App

To create a lightning app page:

Go to setup page >> search “app manager” in quick find >> select “app manager” >> click on New lightning App.

Fill the app name in app details as Garage Management Application >> Next >> (App option page) keep it as default >> Next >> (Utility Items) keep it as default >> Next.

To Add Navigation Items:

Select the items (Customer Details,Appointments, Service records, Billing details and feedback, Reports and Dashboards) from the search bar and move it using the arrow button >> Next.

To Add User Profiles:

Search profiles (System administrator) in the search bar >> click on the arrow button >> save & finish.

### Fields

When we talk about Salesforce, Fields represent the data stored in the columns of a relational database. It can also hold any valuable information that you require for a specific object. Hence, the overall searching, deletion, and editing of the records become simpler and quicker.

#### Types of Fields

##### Standard Fields

##### Custom Fields

##### Standard Fields:

As the name suggests, the Standard Fields are the predefined fields in Salesforce that perform a standard task. The main point is that you can't simply delete a Standard Field until it is a non-required standard field. Otherwise, users have the option to delete them at any point from the application freely. Moreover, we have some fields that you will find common in every Salesforce application. They are,

Created By

Owner

Last Modified

Field Made During object Creation

##### Custom Fields:

On the other side of the coin, Custom Fields are highly flexible, and users can change them according to requirements. Moreover, each organiser or company can use them if necessary. It means you need not always include them in the records, unlike Standard fields. Hence, the final decision depends on the user, and he can add/remove Custom Fields of any given form.

#### Creation of fields for the Customer Details object

##### 1. To create fields in an object:

Go to setup >> click on Object Manager >> type object name(Customer Details) in search bar >> click on the object.

Now click on “Fields & Relationships” >> New

Select Data Type as a “Phone”

Click on next.

##### 5. Fill the Above as following:

Field Label: Phone number

Field Name : gets auto generated

Click on Next >> Next >> Save and new.

Note: Follow the above steps for the remaining field for the same object.

2. To create another fields in an object:

Go to setup >> click on Object Manager >> type object name(Customer Details) in search bar >> click on the object.

Now click on “Fields & Relationships” >> New

Select Data type as a “Email” and Click on Next

Fill the Above as following:

Field Label : Gmail

Field Name : gets auto generated

Click on Next >> Next >> Save and new.

Creation of Lookup Fields

Creation of Lookup Field on Appointment Object :

Go to setup >> click on Object Manager >> type object name( Appointment ) in the search bar >> click on the object.

Now click on “Fields & Relationships” >> New

Select “Look-up relationship” as data type and click Next.

Select the related object “ Customer Details” and click next.

Next >> Next >> Save.

Note: Make sure you complete Activity 4 Before continuing.

Creation of Lookup Field on Service records Object :

Go to setup >> click on Object Manager >> type object name( Service records ) in search bar >> click on the object.

Now click on “Fields & Relationships” >> New

Select “Look-up relationship” as data type and click Next.

Select the related object “ Appointment ” and click next.

Make it a required field so click on Required.

Scroll down for Lookup Filter and click on Show filter settings.

Now add the filter criteria.

Field : Appointment: Appointment Date >> Operator : less than >> select field >> Appointment: Created Date

Filter type should be Required.

Error Message : Value does not match the criteria.

Enable the filter by click on Active.

Next >> Next >> Save.

Creation of Lookup Field on Billing details and feedback Object :

Go to setup >> click on Object Manager >> type object name( Billing details and feedback ) in search bar >> click on the object.

Now click on “Fields & Relationships” >> New.

Select “Look-up relationship” as data type and click Next.

Select the related object “ Service records” and click next.

Next >> Next >> Save & new.

Creation of Checkbox Fields

Creation of Checkbox Field on Appointment Object :

Go to setup >> click on Object Manager >> type object name( Appointment ) in search bar >> click on the object.

Now click on “Fields & Relationships” >> New.

Select “Check box” as data type and click Next.

Give the Field Label : Maintenance service

Field Name : is auto populated

Default value : unchecked

Click on next >> next >> save.

Creation of Another Checkbox Field on Appointment Object :

Repeat the steps form 1 to 3.

Give the Field Label : Repairs

Field Nme : is auto populated

Default value : unchecked Click

on next >> next >> save.

Follow the same and create another checkbox with given names

Give the Field Label : Replacement Parts

Field Nme : is auto populated

Default value : unchecked

Click on next >> next >> save.

Creation of Checkbox Field on Service records Object :

Go to setup >> click on Object Manager >> type object name( Service records ) in search bar >> click on the object.

Now click on “Fields & Relationships” >> New.

Select “Check box” as data type and click Next.

Give the Field Label : Quality Check Status

Field Name : is auto populated

Default value : unchecked

Click on next >> next >> save

Creation of date Fields

Creation of Date Field on Appointment Object :

Go to setup >> click on Object Manager >> type object name( Appointment ) in the search bar >> click on the object.

Now click on “Fields & Relationships” >> New.

Select “Date” as data type and click Next.

Give the Field Label : Appointment Date

Field Nme : is auto populated

Make it as a Required field by click on the Required option.

Click on next >> next >> save.

Creation of Currency Fields

Creation of Currency Field on Appointment Object :

Go to setup >> click on Object Manager >> type object name( Appointment ) in the search bar >> click on the object.

Now click on “Fields & Relationships” >> New.

Select “Currency” as data type and click Next.

Give the Field Label : Service Amount

Field Nme : is auto populated

Click on next

Give read only for all the profiles in field level security for profile.

Click on next >> save.

**Creation of Currency Field on Billing details and feedback Object :**

Follow the same steps as mentioned above in Billing details and feedback Object.

Change the label name as mentioned.

Give the Field Label : Payment Paid

Field Name : is auto populated

**Creation of Text Fields**

Go to setup >> click on Object Manager >> type object name( Appointment ) in the search bar >> click on the object.

Now click on “Fields & Relationships” >> New.

Select “Text” as data type and click Next.

Give the Field Label : Vehicle number plate

Field Name : is auto populated

Length : 10

Make field as Required and Unique.

Click on next >> next >> save.

**Creation of Text Fields in Billing details and feedback object :**

Go to setup >> click on Object Manager >> type object name( Billing details and feedback ) in search bar >> click on the object.

Now click on “Fields & Relationships” >> New.

Select “text” as data type and click Next.

Give the Field Label : Rating for service

Field Name : is auto populated

Length : 1

Make field as Required.

Click on next >> next >> save

**Creation of Picklist Fields**

**Creation of Picklist Fields in Service records object :**

Go to setup >> click on Object Manager >> type object name(Service records) in search bar >> click on the object.

Click on fields & relationship >> click on New.

Select Data type as “Picklist” and click Next.

Enter Field Label as “Service Status”, under values select “Enter values, with each value separated by a new line” and enter values as shown below.

The values are: Started, Completed.

Click Next.

Next >> Next >> Save.

Creation of Picklist Fields in Billing details and feedback object :

Go to setup >> click on Object Manager >> type object name(Billing details and feedback) in search bar >> click on the object.

Click on fields & relationship >> click on New.

Select Data type as “Picklist” and click Next.

Enter Field Label as “Payment Status”, under values select “Enter values, with each value separated by a new line” and enter values as shown below.

The values are: Pending, Completed.

Click Next.

Creating Formula Field in Service records Object

Go to setup >> click on Object Manager >> type object name(Service records) in search bar >> click on the object.

Click on fields & relationship >> click on New.

Select Data type as “Formula” and click Next.

Give Field Label and Field Name as “service date” and select formula return type as “Date” and click next.

Insert field formula should be : CreatedDate

click “Check Syntax” .

Click next >> next >> Save.

To create a validation rule to an Appointment Object

Go to the setup page >> click on object manager >> From drop down click edit for Appointment object.

Click on the validation rule >> click New.

Enter the Rule name as “ Vehicle ”.

Insert the Error Condition Formula as :-

NOT(REGEX( Vehicle\_number\_plate\_c , "[A-Z]{2}[0-9]{2}[A-Z]{2}[0-9]{4}"))

Enter the Error Message as “Please enter valid number ”, select the Error location as Field and select the field as “Vehicle number plate”, and click Save.

To create a validation rule to an Billing details and feedback Object

Go to the setup page >> click on object manager >> From drop down click edit for Billing details and feedback object.

Click on the validation rule >> click New.

Enter the Rule name as “ rating\_should\_be\_less\_than\_5”.

Insert the Error Condition Formula as :-

NOT( REGEX( Rating\_for\_service\_\_c , "[1-5]{1}" ))

Enter the Error Message as “rating should be from 1 to 5”, select the Error location as Field and select the field as “Rating for Service”, and click Save.

To create a matching rule to an Customer details Object Go

to quick find box in setup and search for matching Rule.

Click on matching rule >> click on New Rule.

Select the object as Customer details and click Next.

Give the Rule name : Matching customer details

Unique name : is auto populated

Define the matching criteria as

Field	Matching Method
1. Gmail	Exact
2. Phone Number	Exact

Click save.

After Saving Click on Activate.

To create a Duplicate rule to an Customer details Object

Go to quick find box in setup and search for Duplicate rules.

Click on Duplicate rule >> click on New Rule >> select customer details object.

Give the Rule name as : Customer Detail duplicate

Scroll a little in Matching rule section

Select the matching rule : Matching customer details

And Click on save.

After saving the Duplicate Rule, Click on Activate.

A profile is a group/collection of settings and permissions that define what a user can do in salesforce. Profile controls “Object permissions, Field permissions, User permissions, Tab settings, App settings, Apex class access, Visualforce page access, Page layouts, Record Types, Login hours & Login IP ranges. You can define profiles by the user's job function. For example System Administrator, Developer, Sales Representative.

Types of profiles in salesforce

**Standard profiles:**

By default salesforce provides below standard profiles.

Contract Manager

Read Only

Marketing User

Solutions Manager

Standard User

System Administrator.

We cannot deleted standard ones

Each of these standard ones includes a default set of permissions for all of the standard objects available on the platform.

**Custom Profiles:**

Custom ones defined by us.

They can be deleted if there are no users assigned with that particular one.

To create a new profile:

Go to setup >> type profiles in quick find box >> click on profiles >> clone the desired profile (Standard User) >> enter profile name (Manager) >> Save.

While still on the profile page, then click Edit.

Select the Custom App settings as default for the Garage management.

Scroll down to Custom Object Permissions and Give access permissions for Appointments,Billing details and feedback , service records and customer details objects as mentioned in the below diagram.

Changing the session times out after should be “ 8 hours of inactivity”.

Change the password policies as mentioned :

User passwords expire in should be “ never expires ”.

Minimum password length should be “ 8 ”, and click save.

Go to setup >> type profiles in quick find box >> click on profiles >> clone the desired profile (Salesforce Platform User) >> enter profile name (sales person) >> Save.

While still on the profile page, then click Edit.

Select the Custom App settings as default for the Garage management.

Scroll down to Custom Object Permissions and Give access permissions for Appointments,Billing details and feedback , service records and customer details objects as mentioned in the below diagram.

And click save.

A role in Salesforce defines a user's visibility access at the record level. Roles may be used to specify the types of access that people in your Salesforce organization can have to data. Simply put, it describes what a user could see within the Salesforce organization.

Creating Manager Role:

Go to quick find >> Search for Roles >> click on set up roles.

Click on Expand All and click on add role under whom this role works.

Give Label as "Manager" and Role name gets auto populated. Then click on Save.

Creating another two roles under manager

Go to quick find >> Search for Roles >> click on set up roles.

Click plus on CEO role, and click add role under manager.

Give Label as "sales person" and Role name gets auto populated. Then click on Save.

A user is anyone who logs in to Salesforce. Users are employees at your company, such as sales reps, managers, and IT specialists, who need access to the company's records. Every user in Salesforce has a user account. The user account identifies the user, and the user account settings determine what features and records the user can access.

Go to setup >> type users in quick find box >> select users >> click New user. Fill in the fields

First Name : Niklaus

Last Name : Mikaelson

Alias : Give a Alias Name

Email id : Give your Personal Email id

Username : Username should be in this form: text@text.text

Nick Name : Give a Nickname

Role : Manager

User licence : Salesforce

Profiles : Manager

Save.

Repeat the steps and create another user using

Role : sales person

User licence : Salesforce Platform

Profile : sales person

Note : create atleast 3 users with these permissions.

Public groups are a valuable tool for Salesforce administrators and developers to streamline user management, data access, and security settings. By creating and using public groups effectively, you can maintain a secure and organized Salesforce environment while ensuring that users have appropriate access to the resources they need.

#### Creating New Public Group

Go to setup >> type users in quick find box >> select public groups >> click New.

Give the Label as “sales team”.

Group name is autopopulated.

Search for Roles.

In Available Members select Sales person and click on add it will be moved to selected member.

Click on save.

Salesforce allows you to configure sharing settings to control how records are accessed and shared within your organization. These settings are crucial for maintaining data security and privacy.

Salesforce provides a variety of tools and mechanisms to define and enforce sharing rules, such as:

#### Organization-Wide Default (OWD) Settings:

These settings define the default level of access for all objects within your Salesforce org.

OWD settings include Private, Public Read-Only, Public Read/Write, and Controlled by Parent.

OWD settings can be configured for each standard and custom object.

#### Role Hierarchy:

Salesforce uses a role hierarchy to determine record access.

Users at higher levels in the hierarchy have greater access to records owned by or shared with users lower in the hierarchy.

The role hierarchy is often used in combination with OWD settings to grant different levels of access.

#### Profiles and Permission Sets:

Profiles and permission sets allow administrators to specify object-level and field-level permissions for users.

Profiles are typically used to grant general object and field access, while permission sets can be used to extend those permissions to specific users.

### Sharing Rules:

Sharing rules are used to extend access to records for users who meet specific criteria.

They can be used to grant read-only or read-write access to records owned by other users.

### Manual Sharing:

Administrators and record owners can manually share specific records with other users or groups.

Go to setup >> type users in quick find box >> select Sharing Settings >> click Edit.

Change the OWD setting of the Service records Object to private as shown in fig.

Click on save and refresh.

Scroll down a bit, Click new on Service records sharing Rules.

Give the Label name as “ Sharing setting”

Rule name is auto populated.

In step 3 : Select which records to be shared, members of “ Roles ” >> “ Sales person”

In step 4: share with, select “ Roles ” >> “ Manager ”

In step 5 : Change the access level to “ Read / write ”.

Click on save.

In Salesforce, a flow is a powerful tool that allows you to automate business processes, collect and update data, and guide users through a series of screens or steps. Flows are built using a visual interface and can be created without any coding knowledge.

### Create a Flow

Go to setup >> type Flow in quick find box >> Click on the Flow and Select the New Flow.

Select the Record-triggered flow and Click on Create.

Select the Object as “Billing details and feedback” in the Drop down list.

Select the Trigger Flow when: “A record is Created or Updated”.

Select the Optimize the flow for: “Actions and Related Records” and Click on Done.

Under the Record-triggered Flow Click on “+” Symbol and In the Drop down List select the “Update records Element”.

Give the Label Name : Amount Update

Api name : is auto populated

Set a filter condition : All Conditions are met(AND)

Field : Payment\_Status\_\_c

Operator : Equals

Value : Completed

And Set Field Values for the Billing details and feedback Record

Field : Payment\_Paid\_\_c

Value : {!\$Record.Service\_records\_\_r.Appointment\_\_r.Service\_Amount\_\_c}

Click On Done.

Before creating another Element. Create a New Resource form Toolbox form top left.

Click on the New Resource, And select Variable.

Select the resource type as text template.

Enter the API name as “ alert”.

Change the view as Rich Text ? View to Plain Text.

In body field paste the syntax that given below.

Dear {!\$Record.Service\_records\_\_r.Appointment\_\_r.Customer\_Name\_\_r.Name},

I hope this message finds you well. I wanted to take a moment to express my sincere gratitude for your recent payment for the services provided by our garage management team. Your prompt payment is greatly appreciated, and it helps us continue to provide top-notch services to you and all our valued customers.

Amount paid : {!\$Record.Payment\_Paid\_\_c}

Thank you for Coming .

Click done.

Now Click on Add Element , select Action.

Their action bar will be opened in that search for “ send email ” and click on it.

Give the label name as “ Email Alert”

API name will be auto populated.

Enable the body in set input values for the selected action.

Select the text template that created , Body : {!alert}

Include recipient address list select the email form the record.

RecipientAddressList:

{!\$Record.Service\_records\_\_r.Appointment\_\_r.Customer\_Name\_\_r.Gmail\_\_c}

Include subject as " Thank You for Your Payment - Garage Management".

Click done.

Click on save. Give the Flow label , Flow Api name will be autopopulated.

And click save, and click on activate.

Create another Flow

Go to setup ? type Flow in quick find box ? Click on the Flow and Select the New Flow.

Select the Record-triggered flow and Click on Create.

Select the Object as " Service records"in the Drop down list.

Select the Trigger Flow when: "A record is Created or Updated".

Select the Optimise the flow for: "Actions and Related Records" and Click on Done.

Under the Record-triggered Flow Click on "+" Symbol and In the Drop down List select the "Update records Element".

Set a filter condition : All Conditions are met(AND)

Field : Quality\_Check\_Status\_\_c

Operator : Equals

Value : True

And Set Field Values for the Billing details and feedback Record

Field : Service\_Status\_\_c

Value : Completed

Click On Done.

Click on save

Given the Flow label as Update Service Status , Flow Api name will be auto populated.

And click save, and click on activate.

Apex Trigger

Apex can be invoked by using triggers. Apex triggers enable you to perform custom actions before or after changes to Salesforce records, such as insertions, updates, or deletions.

A trigger is Apex code that executes before or after the following types of operations:

insert  
update  
delete  
merge  
upsert  
undelete

For example, you can have a trigger run before an object's records are inserted into the database, after records have been deleted, or even after a record is restored from the Recycle Bin.

You can define triggers for top-level standard objects that support triggers, such as a Contact or an Account, some standard child objects, such as a CaseComment, and custom objects. To define a trigger, from the object management settings for the object whose triggers you want to access, go to Triggers.

There are primarily two types of Apex Triggers:

**Before Trigger:** This type of trigger in Salesforce is used either to update or validate the values of a record before they can be saved into the database. So, basically, the before trigger validates the record first and then saves it. Some criteria or code can be set to check data before it gets ready to be inserted into the database.

**After Trigger:** This type of trigger in Salesforce is used to access the field values set by the system and affect any change in the record. In other words, the after trigger makes changes to the value from the data inserted in some other record.

Apex handler

UseCase : This use case works for Amount Distribution for each Service the customer selected for there Vehicle.

Login to the respective trailhead account and navigate to the gear icon in the top right corner.

Click on the Developer console. Now you will see a new console window.

In the toolbar, you can see FILE. Click on it and navigate to new and create New apex class.

Name the class as "AmountDistributionHandler".

Code:

```
public class AmountDistributionHandler {  
  
    public static void amountDist(list listApp){  
        list serList = new list();  
  
        for(Appointment__c app : listApp){
```

```

        if(app.Maintenance_Service__c == true && app.Repairs__c == true &&
app.Replacement_Parts__c == true){           app.Service_Amount__c =
10000;
}

else if(app.Maintenance_Service__c == true && app.Repairs__c == true){

app.Service_Amount__c = 5000;
}

else if(app.Maintenance_Service__c == true && app.Replacement_Parts__c == true){

app.Service_Amount__c = 8000;
}

else if(app.Repairs__c == true && app.Replacement_Parts__c == true){

app.Service_Amount__c = 7000;
}

else if(app.Maintenance_Service__c == true){

app.Service_Amount__c = 2000;
}

else if(app.Repairs__c == true){

app.Service_Amount__c = 3000;
}

else if(app.Replacement_Parts__c == true){

app.Service_Amount__c = 5000;
}

}

}

}

}

```

Trigger Handler :

How to create a new trigger :

While still in the trailhead account, navigate to the gear icon in the top right corner.

Click on developer console and you will be navigated to a new console window.

Click on File menu in the tool bar, and click on new? Trigger.

Enter the trigger name and the object to be triggered.

Name : AmountDistribution sObject : Appointment\_\_c

Syntax For creating trigger :

The syntax for creating trigger is :

Trigger [trigger name] on [object name]( Before/After event)

```
{  
}
```

In this project , trigger is called whenever the particular records sum exceed the threshold i.e minimum business requirement value. Then the code in the trigger will get executed.

Handler for the Appointment Object

Code:

```
trigger AmountDistribution on Appointment__c (before insert, before update) {  
  
    if(trigger.isbefore && trigger.isinsert || trigger.isupdate){  
        AmountDistributionHandler.amountDist(trigger.new);  
  
    }  
}
```

Reports give you access to your Salesforce data. You can examine your Salesforce data in almost infinite combinations, display it in easy-to-understand formats, and share the resulting insights with others. Before building, reading, and sharing reports, review these reporting basics. Types of Reports in Salesforce

Tabular

Summary

Matrix

Joined Reports

Click on the app launcher and search for reports.

Click on the report tab, click on new folder.

Give the Folder label as “Garage Management Folder”, Folder unique name will be auto populated.

Click save.

Sharing a report folder

Go to the app >> click on the reports tab.

Click on the All folder , click on the Drop down arrow for Garage Management folder, and Click on share.

Select the share with as “roles”, in name field search for “manager”, give “view” as access for that role.

Then click share, and click on Done.

#### Create Report Type

Go to setup >> type users in quick find box >> select Report Type >> click on Continue.

Click on new custom report type.

Select the Primary object as “ Customer details” .

Give the Report type Label as “ Service information ”

Report type Name is autopopulated.

Keep the Description as same.

Select Store in Category as “ other Reports ”

Select the deployment status as “ Deployed ”, click on Next.

now , Click on Related object box.

Click on Select Object, choose Appointment Object as shown in fig.

Again Click to relate another object.

And select the related object as “ service records”.

Repeat the process and select the related object as “ Billing details and feedback”.

And click on save.

#### Create Report

Note : Before creating report, create latest “10” records in every object.

Try to fill every field in each record for better experience.

Go to the app >> click on the reports tab

Click New Report.

Select the Category as other reports, search for Service Information, select that report, click on it. And click on start report.

Their outline pane is opened already, select the fields that mentioned below in column section.

Customer name

Appointment Date

Service Status

Payment paid

Remove the unnecessary fields.

Select the fields that mentioned below in GROUP ROWS section.

Rating for Service

Report unique Name is auto populated.

Select the folder the created and Click on save.

Dashboards help you visually understand changing business conditions so you can make decisions based on the real-time data you've gathered with reports. Use dashboards to help users identify trends, sort out quantities, and measure the impact of their activities. Before building, reading, and sharing dashboards, review these dashboard basics.

Create Dashboard Folder

Click on the app launcher and search for dashboard.

Click on dashboard tab.

Click new folder, give the folder label as “ Service Rating dashboard”.

Folder unique name will be auto populated.

Click save.

Follow the same steps, from Reports Milestone and Activity 2, and provide the sharing settings for the folder that was just created.

Create Dashboard

Go to the app >> click on the Dashboards tabs.

Give a Name and select the folder that created, and click on create.

Select add component.

Select a Report and click on select.

Select the Line Chart. Change the theme.

Click Add then click on Save and then click on Done.

Preview is shown below.

After that Click on Subscribe on top right.

Set the Frequency as “ weekly ”.

Set a day as monday.
